

## Case study: Agricultural / Bio-Gas

ELECTRICAL MECHANICAL PROCESS

### Client:

**A global leader in sustainable solutions for the generation of renewable energy and the conversion of waste to resources**

### Challenge:

As part of the anaerobic digestion process, the gas created is harvested and used to create energy. At two of our client's plants, the mixers installed within the anaerobic digestion tanks malfunctioned and required removing.

### Result:

In order to remove the mixers our skilled staff used BA equipment so that they could work safely in a gaseous environment. Once removed, we carried out strip and reports on the mixers and subsequently repaired them before re-installing.
